10 TIMES FASTER
A FRACTION OF THE SIZE

With its compact size, lower running costs, ergonomic design, smart Instrument Tracking System (ITS) and two flexible operating modes offering 10 times faster sterilization than conventional sterilizers, the STERLINK FPS 15s Plus Plasma Sterilizer is a new revolution in sterilization technology.

FEATURES

Patented Vaporizer Technology	With an industry leading PFEIFFER vacuum pump at its heart, the STERLINK delivers perfect vacuum condition for a perfect sterilization process.
STERPACK 7-minute pouch mode 14-minute plus pouch mode	STERPACK Pouch Sterlization mode allows for an ultra-fast cycle time of just 7 minutes. The sterilant is stored safely inside the pouch, which is easily loaded into the STERLINK's ergonomic chamber and leaves no residue (so there's no cleaning).
STERLOAD 28 minute chamber mode	Sterilize up to 15 litres in chamber mode for ultimate efficiency. Simply load a STERLOAD cartridge and sterilize a whole set of medical tools all at once. The sterilant is stored safely inside the cartridge and delivers a residue-free result.
Smart ready	STERLINK's Smart Ready system automatically detects and removes moisture before the cycle begins. The result? Perfect sterilization every time.
Instrument tracking system	Smart monitoring means smart servicing. Real-time data monitoring of device usage ensures there's advance notice of your STERLINK's service requirements. So it keeps performing and so can your instruments.
